

Table of contents

Preface	i
1. Introduction	1
2. Background and context	3
2.1 Precast concrete structures: background	3
2.2 Sustainability of precast concrete structures	3
2.2.1 Environmental aspects	3
2.2.2 Economic aspects	4
2.2.3 Social aspects	4
2.3 Sustainability performance assessment	4
3. Methodology	6
3.1 Introduction to MIVES	6
3.1.1 Structuring the decision: decision-making tree	6
3.1.2 Normalising indicators: value functions	7
3.1.3 Aggregating the results: weights	9
3.2 Development of the proposed model	10
4. Decision-making model proposed	12
4.1 Economic requirement indicators	13
4.1.1 Direct costs	13
4.1.2 Indirect costs	14
4.1.3 Maintenance costs	15
4.1.4 Dismantling costs	16
4.1.5 Production and assembly time	17
4.2 Environmental requirement indicators	18
4.2.1 Emissions of CO ₂ -eq	18
4.2.2 Energy consumption	18
4.2.3 Materials – index of efficiency	19
4.3 Social requirement indicators	21
4.3.1 Safety – index of risk	21
4.3.2 Third parties (effects on) – social benefits	22
4.3.3 Disturbances in construction	23

5.	Case study	26
5.1	Building design and inventory	26
5.2	Scope of the impact assessment	27
5.2.1	Construction phase	27
5.2.2	End of use phase	28
5.3	Quantification of the indicators	28
5.3.1	Economic sustainability	28
5.3.2	Environmental sustainability	29
5.3.3	Social sustainability	29
5.4	Results and discussion	30
5.5	Sensitivity analysis	32
6.	Concluding remarks	34
A.	Appendix	35
